Aggregates & Concrete Mixes

Add instant value to your property

Mentone Pre Mix

Mentone PRE MIX Melbourne's premier specialty concrete company has the largest range of exposed aggregate in Victoria. We at **Mentone PRE MIX** will assist you in the task of choosing your mix to enhance and add value to your property. With the amount of varied mixes that we have and our extensive data base of properties all over Melbourne, we can send our customers to a job very close to their own home ensuring the mix they have chosen is exactly what they want. It also enables us to search for a project where a client has seen one of our products, that they like, at a particular address.

Mentone PRE MIX uses locally sourced products in its mixes to ensure we keep our prices as competitive and affordable for everyone to achieve a beautiful drive way or entertainment area. On the other hand if something special is required, we will source material as requested and personalize a mix design for our customer.

State of the Art Showroom

Our vast range of mixes can be viewed on our website (www.mentonepremix.com.au) but to really understand the textures of different stone blends and finishes of exposed aggregate there's nothing like the real thing. A visit to our Showroom and Concrete Ideas display will leave you excited about your new project. Bring along a photograph, render colour or sample of your bricks and our expert sales team will help you select the most appropriate mix design to suit your project.

Types of finishes of Exposed Aggregate

Water Wash Finish

Ideal for driveways, pool surrounds and pathways. A cost effective hard wearing surface adding value and distinction to your home.

Grinding And Polishing Finish

Remember terrazzo, this is more refined. Suitable for internal floors and outdoor covered areas. Using a surface impregnating method, the concrete surface is ground and then finally buffed to give you a mirror like finish. At the end of the grinding process the concrete surface is extremely hard and does not require sealing. As a feature or for the whole floor in your new home; simply stunning!!!!

Sandblasting Finish

By sandblasting, any rough edges on the stone are removed, giving a slightly smoother surface. A preferred method when vertical surfaces are encountered or with extremely steep driveways.

Grinding And Sandblasting Finish

The ultimate outdoor finish!!!! By surface grinding of the concrete we reveal even more variation in stone colour and as a result the surface is extremely flat. A very light sandblast retextures the surface back to a non-slip finish. Saw-cut into squares, makes a unique outdoor entertainment area, not to mention swimming pool surrounds. Extremely impressive!!!!

What is Exposed Aggregate?

The term Exposed Aggregate is exactly that. We are exposing the stone that we make the concrete from. In turn this gives us a very hard wearing surface as stone is generally harder than concrete. We are able to use a multitude of aggregates including quartz, granites, basalts and marble, to name a few.

The colour of the concrete can be either a similar colour to your stone choice or a contrast. Results can be stunning.

Where can it be used?

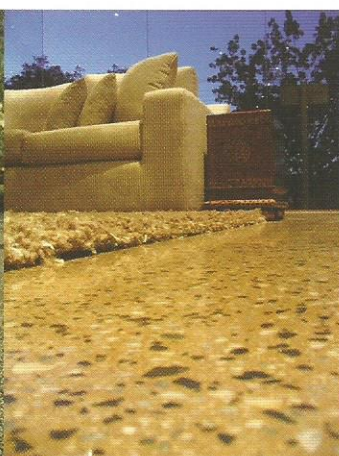

- Driveways
- Pathways
- Pool surrounds
- Internal floors
- Outdoor Entertainment Areas
- All other areas where concrete is applicable
